

Phonovation Ltd

Dublin, Ireland

The challenge

- Management was challenged to focus on the rapid expansion of their business while at the same time having to implement a large data network build-out, operation and management
- Requirement was to build a cost-effective scalable and robust front-end solution in support of the company's demanding growth requirements
- Solution required an extremely powerful and reliable Database engine with with considerable scope for future growth

Our solution

Implement a Hybrid Cloud-based IaaS solution delivering robust and scalable cloud-based compute power combined with database applications in a highly secure managed environment. Another 9 fused the scalability and flexibility inherent in cloud-based solutions with a hybrid physical component that addressed the challenges of a database application in fully virtualised environments. The end solution effectively delivered a fully redundant physical database cluster in companion with Cloud-based IaaS.

Business benefits

Phonovation now have a state of the art network delivering:

- Capability – Highly specified and always available
- Reliability - Ensuring the business "lights are always on"
- Cost Effectiveness Scalability – business and growth requirements aligned with budget considerations

Mr. Gavin Carpenter, Director Phonovation

"Another 9 took a different and refreshing approach to any other company we had spoken with, they spent the time to understand what was important to us and our business. Another 9 greatly impressed us with their solution, it's wasn't all about the technology, although their expertise was evident. With Another 9 as our provider we can get on with managing and expanding our business, knowing we have a technology partner we can rely upon."
